SUMMARY

QA Engineer with 4+ years at XOGO testing digital signage apps on web and physical devices. In production: Playwright with TypeScript (3+ years) and Cypress with JavaScript (1 year) in Azure DevOps CI, plus API, SQL, performance and device-matrix testing, with AI-assisted testing for the last 2 years. Built the automation framework from scratch and co-own release quality across web, API and device apps.

EXPERIENCE

QA Engineer I | XOGO Digital Signage | Kochi, India | September 2022 – Present

- Built the automation framework from zero in Cypress (Sep 2022 – Jun 2023), researched alternatives, presented findings to leadership and led the migration to Playwright for WebKit coverage and cleaner CI. Grew the suite to ~234 tests (~104 UI, ~130 API), running in ~35 minutes; release regression went from ~3 days to ~1 day. Framework: Page Object Model (POM), fixtures, environment config, API + UI assertions.
- Cut the per-run flake rate (tests passing only on retry) from ~5% to ~3% by fixing the root causes (hard waits, missing waits for API calls) in UI specs instead of adding retries.
- Azure DevOps pipeline: lint and tsc on every PR, and the full suite on Chromium and WebKit on each pre-prod deploy with parallel workers, JUnit results in the Azure Test tab, and screenshots and traces on failure.
- Backend API testing in Playwright with schema validation, plus a ~170-test Postman/Bruno suite; SQL (MS SQL Server) data checks and JMeter performance tests.
- Co-own the release quality gate as one of two go/no-go owners. Signed off 35+ production releases across the web manager, API and player apps (Android, iOS, Windows, Fire OS).
- Manual and exploratory testing across the device matrix: Android phones, tablets and XOGO hardware, iOS, Windows UWP, Fire TV Stick 4K, Signage Stick, Chromecast and Raspberry Pi 4B. Introduced ADB automation.
- AI-assisted testing with Claude Code: generate Playwright tests that I review against guide files and pre-AI baselines; API-level root cause analysis found a backend-for-frontend (BFF) hiding a valid API error.
- One of 4 engineers building in-house MCP servers for Claude Code. Built Azure DevOps filtering, bug Repro Steps support and a QA skill that cut my daily board work from ~1 hour to ~10 minutes.
- Visual and UI consistency testing across phones, tablets and signage players: Playwright + axe-core WCAG checks, Figma-vs-build comparison, and transition and playback smoothness on physical devices and emulators (manual and AI-assisted). Shift-left: review Figma designs and shape acceptance criteria with product and dev.
- Profiled Android player memory across v2-v4 in Android Studio Profiler; validated the v4 drop after the native Rust migration (~255 to ~185 MB peak, ~220 to ~170 MB baseline).
- Non-destructive security testing (token manipulation, IDOR, input validation); added a QA security checklist.
- Onboarded and mentored a second automation engineer through pairing and PR reviews (POM, no hard waits, API + UI assertions). He was co-owning releases within 6 months.

PROJECTS

Nithyakarma Quality Lab – https://github.com/HunterSreeni/nithyakarma-quality-lab
39 E2E test cases in Playwright (TypeScript) and Selenium (Java + TestNG, Page Object Model) against the live app, run in GitHub Actions. Dependency-ordered execution, and event-driven waits instead of polling, cutting the per-save-check wait from ~533 ms to ~228 ms.

Nithyakarma Delivery Pipeline – https://github.com/HunterSreeni/nithyakarma-delivery-pipeline
Java + Selenium + REST Assured suite run through a delivery pipeline: Docker image, Kubernetes Job on kind with a Chrome sidecar, and a parameterised Jenkins pipeline. WebDriver BiDi network waits and request interception.

SKILLS

Test Automation – Playwright (TypeScript), Cypress (JavaScript), API testing (Playwright, Postman, Bruno), JMeter, Page Object Model, Visual Validation, Accessibility (WCAG, axe-core), Manual & Exploratory, Device Matrix

CI/CD, Tooling & AI – Azure DevOps, Git/GitHub, Agile/Scrum, Figma, Claude Code, MCP, Codex, Ollama, Gemini

Languages & Data – TypeScript, JavaScript, SQL (MS SQL Server)

Platforms – Android/ADB, iOS, Windows, Fire OS, Shell/Linux, PowerShell, Android Studio Profiler

Project experience – Java (Selenium, TestNG, REST Assured), Python, Docker, Jenkins, GitHub Actions, Kubernetes

CERTIFICATIONS

Jr Penetration Tester, TryHackMe (2025) | DevOps Mastery: Jenkins, Kubernetes, Docker & ArgoCD, Udemy (2026) | Google Cloud Gen AI Academy APAC (2026) | Claude Code and Claude 101, Anthropic (2026) | TestMu AI Test Automation Professional Certificate (formerly LambdaTest) (2023)

EDUCATION

MSc, Materials Engineering | University of Miskolc, Hungary | 2019–2021

BE, Mechanical Engineering | Sriram Engineering College, Thiruvallur | 2013–2017
