SUMMARY

SDET with ~4 years of quality engineering experience, full-time QA owner of end-to-end test strategy, automation, and release validation for a multi-platform product. Builds and maintains automation frameworks (Playwright, API testing, CI/CD-integrated), not just test cases, and ships full-stack software on the side.

EXPERIENCE

QA Engineer | XOGO | Kochi, India | Sep 2022 - Present

- Own testing across XOGO's full stack: database, backend, web manager, and player clients across Android, iOS, and Amazon Fire. Collaborate cross-functionally with dev and product from the requirements stage on major features (shift-left) to shape behavior around real user pain points before build, not just test after.
- Own the automation suite end to end: build and maintain test coverage, and wire test plans directly into the Azure DevOps pipeline (CI/CD).
- Cut pre/post-release regression and smoke testing from 2-3 days (fully manual) to about 1 day (45-min automated regression suite, 45-min automated smoke suite, plus manual testing), and increased release cadence from once every 2 months to once every 2 weeks.
- Manual and automated testing across every surface: web-based Manager, native player apps (Android, Fire OS, iOS), and hardware devices (Firestick, Chromecast), within an Agile development flow.
- API and database-backed functionality testing, defect investigation, and root-cause debugging using shell, ADB, and PowerShell. Systematic, user-POV testing of major feature launches to catch edge-case failures before they ever reach an end user.
- Co-own release sign-off with one other QA engineer - final go/no-go decision-maker on every production release; provide testing strategy and automation direction to the wider QA team.

PROJECTS

Electronium (electron-mcp-browser) - github.com/HunterSreeni/electron-mcp-browser Local-first MCP server bridging AI assistants to a real, logged-in Chrome session via Chrome DevTools Protocol, built to solve anti-bot blocking that stock Playwright automation hits in production. Direct evidence of browser-automation-at-the-protocol-level engineering.

Steady - Google x Hack2skill PromptWars: Kerala GenAI-powered recovery companion app, built solo in one hackathon sprint with a full end-to-end test suite, not just a demo. #6 on the leaderboard, 4 bonus-round rewards.

Nithyakarma - nithyakarma.org Community daily-ritual tracker built in React + Vite, packaged for Android/PWA via Capacitor. iOS in progress. Owned build, release, and debugging solo for a live user base.

mypensieve (sunset) - npmjs.com/package/mypensieve Autonomous CLI agent with persistent memory across sessions, built on Node.js with SQLite for persistent state. Published to npm, 22 versions shipped through an automated GitHub Actions release pipeline, real proof of CI/CD-integrated release process.

SKILLS

Test Automation: Playwright, Cypress, Selenium WebDriver, Appium, API testing (Postman, Bruno, REST Assured), Page Object Model, JMeter (performance/load - light exposure)

CI/CD & Tooling: Azure DevOps, GitHub Actions, Git, Jenkins, Jira

Process: Agile/Scrum

Platforms: Android/ADB, Shell/Linux, PowerShell/Windows, Docker (basic), cross-platform device testing (Firestick, Chromecast)

Languages: TypeScript/JavaScript, React, Vue, Python, SQL (MS SQL Server / SSMS - backend DB validation on release testing)

AI-Native Development: Claude Code, MCP (building and consuming servers), agent orchestration, Gemini, Ollama, LM Studio, Codex/GPT, n8n, GitHub Copilot (light exposure), Prompt Engineering

CERTIFICATIONS

- Claude Code 101, Anthropic (Jul 2026)
- Claude 101, Anthropic (Jul 2026)
- Test Automation Professional Certificate, LambdaTest (2023)
- Software Testing with Jira & Agile, Udemy (2022)
- Selenium WebDriver with Java, Udemy (2022)
- Jr Penetration Tester, TryHackMe (Sep 2025)

EDUCATION

Master of Science, Materials Engineering - University of Miskolc, Hungary, Sep 2019 - Jul 2021

Bachelor's Degree, Mechanical Engineering - Sriram Engineering College, Thiruvallur, Aug 2013 - Apr 2017
