SUMMARY

QA Engineer with 4 years of experience working in a full SDET scope. Built the test automation framework (Playwright, TypeScript) for a multi-platform product from zero and own it end to end, across web, API, database and native client applications. Co-own the release quality gate. Write production software, which is why the automation is engineering rather than test cases/scripts.

EXPERIENCE

QA Engineer I | XOGO Digital Signage | Kochi, India | September 2022 – Present

- Built the test automation framework from zero after joining. Started with Cypress in the Azure DevOps pipeline; six months in, migrated to Playwright after research and comparison, for WebKit engine cross-browser coverage and cleaner CI integration.
- Replaced a fully manual, multi-day release regression process with an automated suite that runs under an hour, enabling a materially faster and more predictable release cadence.
- Co-own the release quality gate end to end: releases are blocked on any functional or sanity failures, plus defect triage. One of the two final go/no-go decision makers on every production release.
- Design, document, and test accessibility (A11y) guidelines against the WCAG principles as part of the QA process along with visual regression testing to catch unintended UI changes.
- Automated coverage across the web application, API and database validation layers. Native applications (Android, iOS, Fire OS) and streaming hardware verified manually against a priority device matrix, with recently introduced Android Automation.
- Collaborate with the development and product team from the requirements stage to shape the testable acceptance criteria before build, covering authentication, billing, and access-control features.
- Cross-platform defect investigation and root-cause debugging using shell, ADB, and PowerShell.
- Systematic testing of major features launched from a user POV to catch edge-case failures before they reach the end user.
- Onboarded and mentored a second automation engineer, set the standards the team writes tests against, and conduct automation code reviews periodically for consistency, reusability and maintainability.
- Use of AI agents (Claude Code) in day-to-day QA work, across automation development, test design, documentation, and failure analysis.

PROJECTS

Nithyakarma – https://nithyakarma.org
A daily-ritual tracker that displays day-to-day information from astrology calculations. React+Vite PWA, packaged for Android via Capacitor. Built it from scratch and released it on the Android/Google Play Store. GitHub Actions pipeline for gated release and CI/CD for running automated tests before release.

Steady – GooglexHack2Skill Prompt Wars: Kerala
GenAI powered substance abuse recovery companion application built solo in one hackathon sprint with a full end-to-end test suite, not just a demo. #6 on the leaderboard, achieved 4 bonus rewards.

MyPensieve (sunset) - https://www.npmjs.com/package/mypensieve
Autonomous CLI agent with persistent memory across sessions, built on Node.js with SQLite for persistent memory state. Published to npm, shipped through GitHub Actions release pipeline.

SKILLS

Test Automation – Playwright, Cypress, Selenium WebDriver, REST API testing (Postman, Bruno, REST Assured), Page Object Model, Visual Regression Testing, UI/UX testing, Accessibility (A11y/WCAG), Performance testing (JMeter)
CI/CD & Tooling – Azure DevOps, GitHub Actions, Git, Jenkins, Jira.
Process – Agile, Scrum
Platforms – Android/ADB, Shell/Linux, PowerShell/Windows, cross-platform device testing (Firestick, Chromecast, RPi)
Languages – TypeScript/JavaScript, React, Vue, Python, SQL (MS SQL Server/SSMS – backend DB validation)
AI-Native Development – Claude, Claude Code, MCP, Agentic Engineering, Google/Gemini, Ollama, LM Studio, Codex/GPT, Prompt Engineering.

CERTIFICATIONS

- Google Cloud Gen AI Academy APAC 2026 – Cohort 3, Google Cloud x Hack2Skill (September 2026)
- Claude Code and Claude 101, Anthropic (July 2026)
- Jr Penetration Tester, TryHackMe (September 2025)
- Test Automation Professional Certification, LambdaTest (2023)
- Selenium WebDriver with Java; Software Testing with Jira & Agile, Udemy (2022)

EDUCATION

Master of Science, Materials Engineering – University of Miskolc, Hungary, September 2019 – July 2021
Bachelor of Engineering, Mechanical Engineering – Sriram Engineering College, Thiruvallur, August 2013 – April 2017
